Background

Success

• Changed the Profile of the disease
• In all the endemic countries

Limitation

• No optimal utilization of available chemotherapy facilities
Background

Success

• Changed the Profile of the disease
• In all the endemic countries

Limitation

• No optimal utilization of available chemotherapy facilities
Research Question-1

Programme related factors:
Late detection and registration of cases for MDT, especially after integration of leprosy control programme with Primary Health Care
Research Question-2

Behavioural factors:
• Non compliance and
• Defaulting
Research Question-3

Biomedical factors:
- Drug resistance
- Relapses
Operational research

**Aim:** Development of culturally acceptable methods through involvement of local community and patient’s family members

- To promote early case detection and registration for chemotherapy from proper sources
- To prevent on compliance and defaulting
